

Indiana Crop Weather

Harvest Gains Ground

Harvest progressed throughout the mostly dry week before weekend precipitation slowed field activity, according to Nathaniel Warenski, State Statistician, USDA NASS, Indiana Field Office. Soil moisture levels decreased slightly from the previous week, with 95 percent of topsoil moisture reported as adequate or surplus.

The average temperature for the week was 45.6 degrees Fahrenheit, 2.8 degrees above normal for the State. The amount of rainfall varied from none to 0.71 inches over the week. The statewide average precipitation was 0.40 inches, 0.48 inches below normal. There were 4.8 days suitable for fieldwork for the week ending November 14.

Dry conditions allowed for significant harvest progress last week. Corn and soybean harvest both moved closer towards their respective five-year averages but remained slightly behind schedule. Corn harvest progressed slower in some areas due to leaning corn caused by wind damage. Winter wheat planting progressed closer to completion, and crop conditions remained stable. Livestock were reported in good condition. Other activities for the week included hauling grain, marketing livestock, equipment maintenance, and attending Extension programs.

Crop Moisture Content: Week Ending 11/14/21

Crop	This week	Last week	Last year	5 Year average
	(percent)	(percent)	(percent)	(percent)
Field corn harvested for grain	17	18	17	17
Soybeans harvested	14	14	12	NA
